12)S.Banupriya

(57) Abstract :
AI-Driven Ayurvedic Panchakarma Therapy Planning System for Cancer Symptom Management and Wellness Enhancement is the proposed invention. The proposed invention integrates patient-specific information, including non-diagnostic cancer care details, symptom profiles, Ayurvedic assessment parameters, lifestyle factors, and patient-reported outcomes, to support personalized Panchakarma therapy planning. Artificial intelligence and machine learning models, combined with rule-based logic derived from classical Ayurvedic principles, analyze the collected data to recommend suitable Panchakarma procedures, therapy sequencing, duration, and supportive wellness guidance. The system incorporates safety checks, contraindication assessment, and continuous learning from practitioner feedback and therapy outcomes. The invention functions as a clinical decision support tool that complements conventional cancer care, enhances consistency in Ayurvedic therapy planning, and promotes holistic well-being and quality of life for patients.
